

Your Mother Always Said...

It's What's on the Inside That Counts! (Part 1 of a Series)

The bacteria associated with periodontal disease, and the related free radicals, spread throughout the body. It's imperative to have adequate antioxidants on board to neutralize these free radicals.

We now know that antioxidants are a key factor in preventing everything from heart disease to cancer, and even fighting the common cold. We use an extensive, non-surgical, Periodontal Program which will help reduce or eliminate your Periodontal Disease. The **Antioxidant Scanner** is an effective tool in our treatment protocol. Nutrition plays a critical role in the body's ability to heal and regenerate tissue. Using the scanner, we can help our patients monitor the effectiveness of their nutrition and supplement program, increasing the positive outcome of their Periodontal Therapy.

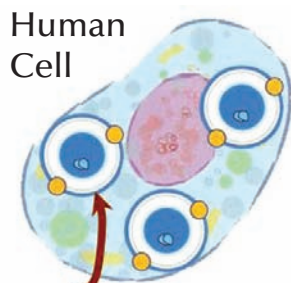

WHAT IS THE SCANNER?

This antioxidant scanner gives you an ability you've never had before - to learn how antioxidants can be measured in your body, providing you with a personalized **Skin Carotenoid Score (SCS)**. It's a revolutionary tool developed to measure the carotenoid antioxidant levels in your skin and prove the effectiveness of your supplements in improving your overall antioxidant health. As seen on the "Dr. Oz" show.

WHY SHOULD I BE SCANNED?

Are you well protected against the damaging effects of normal aging? Science has demonstrated that this antioxidant scanner is the best noninvasive indicator of overall antioxidant status in the body, as well as a good indicator of overall oxidative stress.

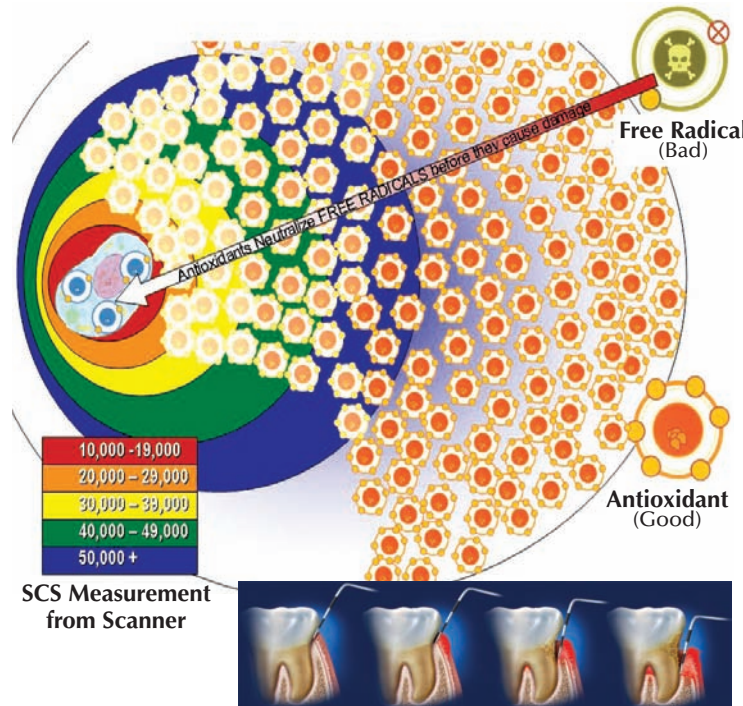

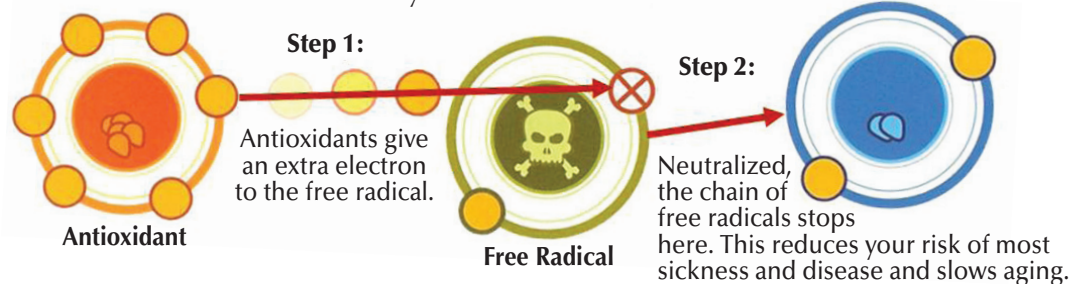

CELLULAR ANTIOXIDANT PROTECTION

Human Cell

Our body's health depends on our cells' health. To slow down aging, limit illness and prevent disease we must protect and feed our cells properly. Cells are made up of atoms. Healthy atoms have "paired" electrons (yellow dots). When healthy cells replicate they make an exact copy. FREE RADICALS, atoms missing an electron, steal electrons from surrounding atoms and they alter or destroy cells. Cells that die and cells that replicate in a damaged state are the cause or contribute to premature aging, sickness and diseases such as cancer, heart disease, osteoporosis and many others.

Healthy Atom

Dr. David Rush

WHAT DOES MY SCS MEAN?

Your SCS is a measurement of the presence of carotenoid antioxidants in your skin. Your SCS will help you determine whether you are consuming an adequate amount of nutrients that contained antioxidants.
