At Kanawha City Veterinary Hospital, we strongly believe in microchipping as a Standard of Care for all our feline and canine patients. A microchip can ensure their protection and safety if ever lost and then found. More than 10 million pets get lost each year and 90% won't return home without effective identification. Unfortunately, getting lost is the number 1 cause of pet death.

Microchipping is as quick and painless as when we administer your pet its regular vaccinations. The chip is inserted between the pet's shoulder blades and stays put there. It is fast, easy and safe.

In the unfortunate event that your pet gets lost or even stolen and is found without its collar, veterinary clinics and shelters across the US will be able to scan your pet and identify him/her thanks to the microchip's unique 10-15 digit alpha-numeric code.

And with enrollment in the HomeAgain® Pet Recovery Service, we can help ensure your pet is returned home safely.

HomeAgain has reunited over 500,000 lost pets with their families; 79,000 since January 2008 alone. We can microchip your pet today during your regular visit. The special price includes the microchip, the injection, all of the pet's relevant information in the recovery database for lifetime of the pet and the first year of extra services with HomeAgain.

We recommend this life saving procedure and service for all our cat and dog patients.

The Staff at Kanawha City Veterinary Hospital

- Yes. Please protect my pet today with a microchip and first year enrollment in HomeAgain.**
- No. I understand that a microchip can help protect my pet, but I do not wish to microchip my pet today.**
