4 Convenient Locations

Towson, MD
Columbia, MD
Frederick, MD
York, PA

What can we help you with?

Every type of corneal transplant:

Penetrating Keratoplasty (PKP)
DSEK and DMEK (endothelial)
- alone, combined or staged with phaco
- can even be before cataract surgery (phakic DMEK)
DALK and Lamellar Keratoplasty
Femto-assisted transplants
Boston Keratoprosthesis

Assisting you with cataract surgery:

Lens selection after LASIK/RK
Corneal surface polishing in ABMD

Suspicious conjunctival/iris lesions:

Pigmented lesions
Carcinoma in-situ
Iris nevi or cysts

Complex cataract surgery:

Pseudoexfoliation
Weak zonules / prior trauma
White or brunescient lenses
Secondary lens placement
IOL Exchange

Complex refractive cases:

LASIK or PRK
- discounted when post-phaco
Phototherapeutic keratectomy
- for corneal scarring
Implantable collamer lenses
- for high corrections / thin corneas

Practice News Updates

Q: Ever wonder when the cornea stabilizes after crosslinking?

A: We will be presenting on the ideal CL refitting time after crosslinking at ASCRS in D.C. In April. Hope to see you all there. Look for publication of this study soon!

Q: Does the preservation time of corneal donor grafts impact success?

A. Check out JAMA Ophthalmology, December 2017 for the full answer, but in short, success rates for patients undergoing DSEK are high irrespective of preservation time (hint: preservation time of <12 days have the highest success rate). Congratulations to co-author Dr. Pramanik for his hard work on the study.

Q: When will Dr. Pillar have more children?

A. June 2nd (hopefully!). She will return from maternity leave on August 27th in full force. During that time Columbia and Frederick patients will be scheduled with Dr. Pramanik in our Towson, MD location within GBMC.
