BOTOX® Dermal Fillers

Offered conveniently during
routine office visits

There is no better complement to a beautiful smile than great-looking skin. At our office, you can benefit from two of the most popular and effective FDA approved wrinkle fighters to improve and prevent the noticeable signs of aging: BOTOX® and Dermal Fillers.

In addition, BOTOX® & Dermal Filler treatments prevent dynamic expression lines from becoming permanent wrinkles and stimulate collagen growth and cell rejuvenation.

What is BOTOX®?

BOTOX® is used to safely and effectively relax facial muscles to correct existing lines and prevent new wrinkles from forming. It will improve the appearance of frown lines, forehead creases, crow's feet, and gummy smiles.

Hyaluronic Dermal Fillers:

As our skin ages, the dermis gradually loses its major constituents: collagen, elastin and hyaluronic acid. Collagen acts as the major support protein for our skin, elastin allows our skin to stay firm and resist wrinkles, and hyaluronic acid is a natural component of the body that helps to trap water and add volume and shape to our skin.

What is Juvederm?

Juvederm is a hyaluronic acid based dermal filler that helps reverse the signs of aging by instantly correcting, enhancing and restoring volume to a more youthful state. Dermal Fillers are used to reduce or eliminate wrinkles around the smile, lift the corners of the mouth, enhance lips, and replace soft-tissue volume loss.

Frequently Asked Questions:

Are treatments painless?

Dental practitioners are experts in injections and anesthetic techniques for minimal or pain-free treatments.

How long do Botox® results last?

BOTOX® results will reach full efficacy in 2 weeks. Everyone metabolizes BOTOX® differently, so results will vary but typically last between 3-4 months. After each re-treatment, less units may be required to produce similar results, and lines will return as less severe since the muscles are now trained to relax.

How long do Dermal Filler results last?

Dermal Filler results are immediate. Depending on the area being treated, results typically last between 6 months - 1 year. Elasticity will gradually be gained from increased collagen production and moisture retention.

Safety and Side Effects

BOTOX® has been used for medical purposes for over 50 years and is FDA approved for safe and effective treatments. The Dermal fillers used in our treatments do not contain any animal proteins, therefore the risk of allergy is very small. Minor bruising and swelling from dermal filler treatments may temporarily occur, so it is best to avoid blood thinners prior to treatments.
