

**CARING FOR YOUR DENTAL IMPLANTS AT HOME:**

You have spent a significant amount of time and money to restore your bite with dental implants. The long-term success of your implants depends largely on the effectiveness of your daily cleaning routine as well as maintaining routine dental cleanings. Just as your natural teeth are susceptible to periodontal disease, dental implants may begin to fail due to lack of care.

We recommend thorough brushing with either an electric toothbrush or a manual toothbrush. Flossing and using a proxabrush will be very important to limit bacterial build-up between the teeth and/or implants. In some cases, a floss threader or Superfloss will help with access.

Should you experience any discomfort, swelling, bleeding gum tissue, or feel a change in your bite, please contact us at 344-0908.
